

IMPOSSIBLE ENGINE

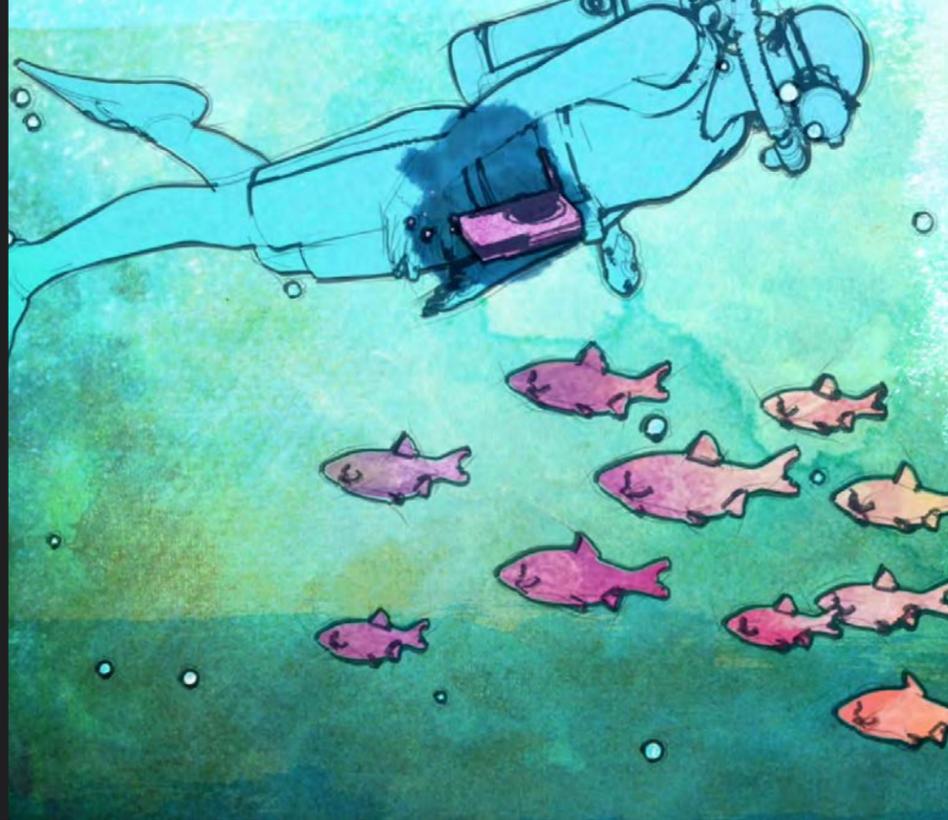

Using animation, live-action, and virtual reality experiences we communicate big ideas through motion.

With offices in both Bend, Oregon and Austin, Texas, we've serviced a diverse roster of clients crafting VR experiences for Deschutes Brewery, animated shorts for technology companies including Twitter and VMware, and a wide range of deliverables for Ad agencies both big and small.

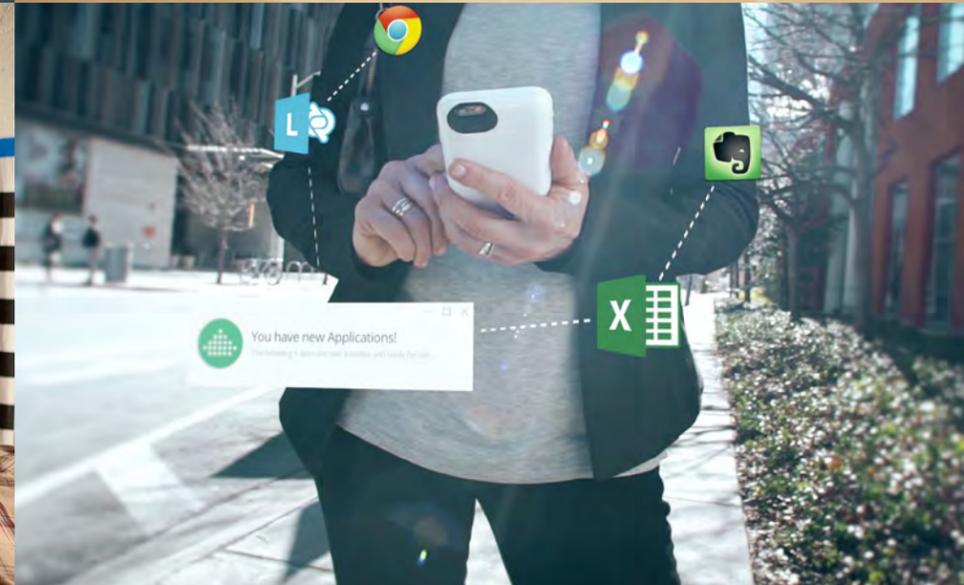

ANIMATION

Our animation capabilities include 2D and 3D animation, stop motion, motion graphics, titles, special fx, ink and watercolor — we even hacked an old oscilloscope to create light-wave animation for Y&R Austin. If you can imagine it, we will find a way to bring it to life.

LIVE ACTION

We can produce and manage any sized project, whether it's a big on-location production, a "run and gun" style documentary, or a seamless studio shoot. We handle all post-production in-house and manage the whole pipeline, from onset technical direction, to VFX production, editing, titles, sound, color and final delivery.

VIRTUAL REALITY

Our favorite thing about this job? Learning new technology and developing the techniques to match it. In 2016 we launched a series of VR films for Deschutes Brewery which allowed their fans to take a virtual tour of the places on their bottles. We recently wrapped filming on a series of 360-degree VR films for the National Forest Service and Newberry Monument, and we're currently developing an educational VR volcano experience using the game engine Unity. During the Bend Film Festival we hosted a VR event showcasing VR films and experiences from our studio and others.

We're applying our 3D animation strengths to create immersive VR experiences for technology brands like VMware as well as in-house VR films purely for entertainment. We look forward to sharing our VR experiences in person as part of our capabilities presentation.
